Q3-Direction of Flex

Style the provided structure as per the instructions below:

- For the `.flex-container`:

  - Set its display property to achieve a flexible layout.

  - Use the `flex-direction` property to arrange the `.box` elements in a column.

  - Center its children both horizontally and vertically by using `justify-content` and `align-items` property.

-
- For each `.box` element:

  - Set the dimensions to `100px` by `100px`.

  - Provide a border of `2px solid black`.

  - Apply a margin of `10px` all around.

  - Set its display property to achieve a flexible layout.

  - Center the number inside both vertically and horizontally by using `justify-content` and `align-items` property.

  - By default, use a background color of `rgb(200, 200, 200)`.

-
- For `#box2` and `#box3`:

  - Override the default background color. Use `rgb(235, 85, 85)` for `#box2` and `rgb(85, 170, 235)` for `#box3`.
