Q2-Skill Test UI

You will be creating the UI of a Skill test as given below.

In the HTML-

- Start by adding a `header` element, which should contain a `h1` containing "Skill Quiz" and a `p` tag containing "Test your knowledge and skills!".

- The `main` should contain a `div` with class name `question`.

- Within this `div` add a `h2` tag with text "Question Title" and a `p` tag with the text "Lorem ipsum dolor sit amet, consectetur adipiscing elit.".

- Inside `div` with class name `question`, create the options as shown in the image. Each of these `list items` must contain a `label` that contains the following values for its `for` attributes- `option1`, `option2`, `option3` and `option4`.

- After these options, there should be a `button`. Give its `class` name as `btn`

Now in CSS-

- Give the `header` a `background color` of `#7289DA` and the texts inside it must have a `font color` of `#fff`

- Give a `20px` of padding on all four sides and the texts must be `centrally` aligned.

- Apply the following styles for your `main` element:

-

    1. Set the `display` property to `flex`.
    2. Use the CSS property to horizontally align the contents in the `main` and set it to `center`.
    3. Use another CSS property to vertically align the contents in the `main` and set it also to `center`.
    4. Set the `height` to `80` viewport height.

- Now apply the following styles to the question box-
-
    1. Set the `background color` of the box to `#f2f2f2`.
    2. Add a `border` with `2px solid` edge and the same `color` as the `header`, as shown in the image
    3. The `padding` is of 20px, text is aligned at center with `max-width` property having value of 400px
    4. The `unordered list` that you have created should not have the bullets. The contents should be aligned to the `left`
    5. Set the `padding` to `0px` and give it a `top & bottom` margin of `20px` and `left & right` margin of `0px`.
    6. Next, give a bottom margin to the `list item` of `10px`.
- Now let's style the button-
-
    1. It should have the same `background color` and `font color` as the `header` and `heading`
    2. Set the `top & bottom` padding of `10px` and `left & right` padding of `20px`.
    3. Remove the default `border` of the button. Make the button's corners rounded by `4px`
    4. When the cursor is over the `button` the cursor should change to a `pointer`
- Replicate the same `background color` and `font color` for the `footer` element as well.

- It should have `10px` padding spacing on all four sides and the text should be `centrally` aligned.

Skill Quiz

Test your knowledge and skills!

Question Title

Lorem ipsum dolor sit amet, consectetur adipiscing elit.

○ Option 1
○ Option 2
○ Option 3
○ Option 4
