Q4-Nested boxes

You are provided with a webpage that has a primary div container and a nested div inside it. Your goal is to design the nested div using the CSS Box Model properties. Here's what needs to be accomplished:

1.
   The outermost layer should be the margin, which should be uniformly set to `20px` around the nested div.
2.
   Next is the border. The border should be `10px` thick, solid, and colored green.
3.
   Inside the border, there's padding. The padding should be `30px` on the top, `15px` on the right, `30px` on the bottom, and `15px` on the left.
4.
   The content area, which is the innermost layer, should have a width of `200px` and a height of `150px`. It should also have a background color of light gray.
